OBJECTIVE

I am a driven AI/ML engineering student with a background in Mathematics, I am seeking a professional internship that combines Software Engineering and AI/ML, where I can apply my hard working nature and academic knowledge to build real world, data driven solutions while gaining hands on industry experience within a high performing technical team.

EDUCATION

Bachelor of Science Honours in Information Technology Specialized in Artificial Intelligence

Sri Lanka Institute of Information Technology

CGPA - 3.23/4.00

2024-present

G.C.E Advanced Level (Mathematics, Physics, Chemistry)

Result- 3Cs

2023(24)

G.C.E Ordinary Level (8 As, 1B)

A For Mathematics, Science, English

2019

PROJECTS

RAG System 🐙

3rd Year Project(Ongoing)

A full-stack RAG application that ingests text files and enables semantic question-answering over them. The ingestion pipeline loads text files, splits them into chunks, and embeds them into a persistent vector database, while the retrieval pipeline performs similarity search to fetch the most relevant chunks for a user query. A React-based UI is planned to make the system interactive for end users.

Technology Stack - Python, LangChain, HuggingFace Embeddings, ChromaDB, Groq, React.js

2026

Multi Model RAG System 🐙

3rd Year Project(Ongoing)

An end-to-end Retrieval-Augmented Generation system that ingests PDF documents and enables conversational, context-aware Q&A over their combined text, tables, and images. A React-based UI is planned to make the system interactive for end users.

Technology Stack - Python, LangChain, HuggingFace Embeddings, Unstructured, Groq, ChromaDB, React.js

2026

EquiHire-Core: The Agentic Bias Firewall 🐙

2nd Year Project

Detect cognitive biases in technical recruitment to notify candidates of assessment results, assign personalized growth feedback, and track the hiring pipeline of evaluated individuals.

Technology Stack - Ballerina, Google Gemini API, HuggingFace, React + TypeScript + Vite, Supabase PostgreSQL, WSO2 Asgardeo, Cloudflare R2

2026

Vehicle Service & Repair Management System (VSRMS) 🇱🇰

2nd Year Project

VSRMS is a full-stack mobile application connecting vehicle owners with service workshops. It provides vehicle management, appointment booking, a full service history log, workshop discovery with ratings, and a location-based 'find nearest workshop' feature.

Technology Stack – React Native (Expo), Node.js + Express, MongoDB Atlas, Asgardeo (WSO2) –
OIDC / OAuth 2.0, Cloudflare R2

2026

INTERESTS

- Backend Development.
- Frontend Development.
- Object Oriented Software Development.
- Machine Learning and Data Science.
- Mathematical/Statistical Modeling.
- Deep Learning.
- Data Structures and Algorithms.
- Cloud Computing.
- Microservices.

TECHNICAL EXPERIENCE

- Programming Languages– Java, C , Python
- Frameworks– Node JS, React JS, Spring Boot
- Databases– MySQL, PostgreSQL, MongoDB
- Advanced Mathematics– Discrete Mathematics, Probability and Statistics
- Version Control Tools– Git, GitHub

HOBBIES

- Singing
- playing guitar

REFERENCES

Dr.Kalpani Manathunga
